Education

P.h.D Computer Science; 4.0 2022
Brigham Young University *Provo, UT*

B.S. Applied and Computational Mathematics; 3.81 2018
Brigham Young University *Provo, UT*

Relevant Experience

Google Brain - Research Intern May - Oct 2020

- Contributed key mathematical and algorithmic insights into a new self-supervised pretraining method that leverages recent advances in differentiable programming and representation learning
- Defined new state of the art performance for audio and vision based tasks
- Streamlined and standardized several scattered experiments across notebooks and code bases. This drastically increased team productivity and we were able to launch multiple large scale experiments daily
- Designed and developed two novel metrics to measure experimental success which were used by the team to communicate our findings to key stake holders
- Orchestrated foundational experiments across several hundred GPUs and decreased data loading time from 5 minutes to 300ms
- Explored the literature and successfully reproduced results from the field which increased our ability to iterate and improve upon existing research

Lyft, Level 5, Autonomous Vehicles - Prediction Intern June - Aug 2019

- Developed A/B testing platform in high performant C++ to compare prediction models locally and in the cloud greatly increasing my team's development velocity
- Identified predictive features and developed real-time feature extraction system for use in machine learning pipeline
- Explored statistical and neural models for dynamical vehicle motion prediction leading to a 22.5% performance improvement
- Lead 3 engineers in exploratory 20% project for semantic code search

Qualtrics - NLP Intern May - Aug 2018

- Achieved ∼96% accuracy with a .005% false positive rate, matching state of the art on phishing detection by researching and implementing system using sophisticated NLP feature engineering and machine learning
- Increased speed of system 3x resulting in a 63% reduction in hardware costs while handling 3 million daily requests by engineering asynchronous API using parallel processing and high performance computing techniques
- Identified, explored, and implemented state of the art emerging topic tracking system which allowed my team to reach their stretch goals for the quarter and led to a **patent**
- The final estimated impact of my internship is $300k - 500k in yearly savings

Amazon Alexa Prize: Team Eve - Machine Learning Researcher Jan - Apr 2018

- Member of team Eve for the Alexa prize challenge. One of Eight teams selected out of hundreds to research and build a social chatbot system to hold arbitrary conversation for 20 minutes on any topic
- Designed and built an offensive speech filtering system using probabilistic methods, which performed ∼3% better than current industry standards
- Researched and designed a complex sentiment analysis tool that classified sentences as having complex sentiment used for noteworthy knowledge retrieval

Perception, Control, and Cognition Lab - Deep Learning Researcher Dec 2016 - Present

- Lead multiple projects from inception to completion while mentoring students with a variety of skill levels which resulted in a number of novel contributions and publications
- 1^{st} place Student Research Conference presentation
- Developed a system to improve MRI quality using a denoising auto encoder
- Designed deep architecture to improve hearing aid quality resulting in signal to noise ratio increase of 197%

Other Experience

President's Leadership Council Presentation: Selected by faculty and staff to represent my college's 4,000+ students by presenting my research to BYU's $1 million+ donors and top administration
2^{nd} **place BYU ACM Hackathon 2019**: Built a computer vision pong game that is controlled with hand detection
2^{nd} **place BI Wolff Hackathon 2018**: Built prescriptive ML solution to predict individual risk of becoming homeless
1^{st} **place BYU ACM Hackathon 2017**: Created Auto Dino program to perfectly play the chrome dino no wifi game
1^{st} **place BYU ACM Hackathon 2016**: Created *Mathify* app using polynomial interpolation to display text as math
2^{nd} **place Global Legal Hackathon Utah**: Made a chrome extension using NLP to summarize terms and conditions which I grew to 2000 active users and sold
Data Science Blog: 300+ monthly readers. Data science problems solved with esoteric programming languages
Ranked 8th in world: Tetris in spring of 2011
